## Section 1 - Conflict Minerals Disclosure

### Items 1.01 and 1.02 Conflict Minerals Disclosure and Report; Exhibit

A copy of NetApp, Inc.'s Conflict Minerals Report is provided as Exhibit 1.01 to this Form SD and is available at the following address:  
<http://investors.netapp.com/corporate-governance.cfm>.

## Section 2 - Exhibits

### Item 2.01 Exhibits

<u>Exhibit No.</u>	<u>Description</u>
1.01	Conflict Minerals Report as required by Items 1.01 and 1.02 of this Form.

## SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the duly authorized undersigned.

**Conflict Minerals Report of NetApp, Inc.  
For the Calendar Year Ended December 31, 2016**

*This Conflict Minerals Report contains forward-looking statements. These statements include statements regarding NetApp's goals for its Conflict Minerals policy and the actions that NetApp intends to take to improve transparency and reporting. All forward-looking statements involve risk and uncertainty. When considering these statements, you should also consider the important factors described in reports and documents NetApp files from time to time with the Securities and Exchange Commission, including the factors described under the sections titled "Risk Factors" in NetApp's most recently filed Annual and Quarterly Reports on Forms 10-K and 10-Q, respectively. Except as required by law, NetApp disclaims any obligation to update information contained in these forward-looking statements whether as a result of new information, future events, or otherwise.*

This is the Conflict Minerals Report for NetApp, Inc. ("NetApp") for calendar year 2016 prepared in accordance with Rule 13p-1 under the Securities Exchange Act of 1934 ("Rule 13p-1").

## **Introduction**

NetApp is a leading provider of innovative storage systems and data management solutions that form the foundation for efficient and flexible IT infrastructures.

Section 1502 of the Dodd-Frank Wall Street Reform and Consumer Protection Act and the rules promulgated thereunder (together "Section 1502") require NetApp to perform certain due diligence procedures and disclose information about the use and origin of certain minerals if these minerals are deemed to be necessary to the functionality or production of a product manufactured or contracted to be manufactured by NetApp. The NetApp products that contain minerals or metals are its hardware products (storage systems and subsystems) that NetApp contracts to manufacture and sells directly or through resellers. The specific minerals covered by these rules consist of tin, tantalum, tungsten and gold and are referred to as "Conflict Minerals."

Conflict Minerals are necessary to the functionality or production of the storage systems and subsystems that NetApp contracts to manufacture. Components and subassemblies that are made in part using Conflict Minerals are sourced from a global supply base that includes distributors, value-added resellers, original equipment manufacturers, original design manufacturers and contract manufacturers.

In accordance with Section 1502, NetApp has performed a "reasonable country of origin inquiry" ("RCOI") on minerals that were in NetApp's supply chain for calendar year 2016 to determine whether these minerals were sourced from the Democratic Republic of the Congo or adjoining countries (the "Covered Countries") and has conducted due diligence measures as described below.

## **Due Diligence Procedures**

In accordance with Rule 13p-1, NetApp undertook due diligence procedures to determine the source and chain of custody of the Conflict Minerals used in its products. NetApp designed its due diligence measures for each of the Conflict Minerals to conform, in all material respects, with the due diligence framework in the Organisation for Economic Co-operation and Development ("OECD") Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas, Second Edition (OECD 2013) ("OECD Framework") and related supplements. NetApp's due diligence measures included:

1. Establishing strong company management systems for conflict minerals supply chain;
2. Identifying and assessing risk in the supply chain;
3. Designing and implementing strategies to respond to identified risks;
4. Supporting industry associations that carry out independent third party audits of smelter/refiner's due diligence practices; and
5. Reporting annually on our supply chain due diligence activities.

### *STEP 1: Establish strong company management systems*

- a) Identified an executive sponsor for NetApp's supply chain transparency objectives to provide internal leadership and guidance to attain NetApp's goal of determining the countries of origin of the Conflict Minerals that are necessary for the production or functionality of its products and eliminating sources of Conflict Minerals that benefit armed groups.
- b) Adopted and posted a Conflict Minerals policy (discussed further below) on its website. NetApp requested all vendors and suppliers of materials that could potentially contain Conflict Minerals (the "in scope suppliers") to comply with the requirements of Section 1502, if applicable, and to support NetApp's compliance. NetApp continues to educate suppliers on its Conflict Minerals policy.

- c) Included Section 1502 requirement contractually in its Master Supply Agreements, requiring suppliers to provide necessary information.
- d) Adopted internal processes, procedures and systems to capture, maintain, retrieve and report on supplier sourcing of Conflict Minerals to further improve transparency and the ability to report on NetApp's sourcing of Conflict Minerals in accordance with Section 1502 in coming years.
- e) Utilized the Conflict Free Sourcing Initiative ("CFSI") Conflict Minerals Reporting Template (the "CMRT") sent to NetApp's in scope suppliers via a third party provider (Resilinc) to gather information on the chain of custody of the necessary Conflict Minerals included in NetApp products (the "RCOI Survey").
- f) Instituted Conflict Minerals risk assessment as part of the NetApp product development process.
- g) Identified personnel within NetApp responsible for the NetApp sustainability program, including responsibility for day-to-day consideration and review of compliance requirements related to the Section 1502.

*STEP 2: Identify and assess risks in the supply chain*

- a) Performed a risk assessment of all parts represented within its product lines followed by a supplier risk assessment. Suppliers were first assessed by determining whether they supplied hardware, software or services. If the supplier was determined to supply hardware, NetApp assessed whether the materials supplied by the supplier could potentially contain Conflict Minerals. Finally, suppliers were surveyed to determine whether they sourced Conflict Minerals from the Covered Countries.
- b) Provided letters to suppliers explaining NetApp's country of origin inquiry and due diligence efforts and requesting supplier cooperation. Suppliers were offered training materials on the requirements of Section 1502, NetApp's plan to achieve compliance with such requirements and NetApp's goal of achieving responsible sourcing from its suppliers.
- c) Partnered with a third party provider to conduct a RCOI Survey of NetApp's in scope suppliers in order to gather information on countries of origin and identify smelters or refiners. The RCOI survey documentation aligned with the CMRT. The in scope suppliers were asked to identify the smelters and refiners who contributed to the 3TG materials contained in parts and components that they supplied to NetApp.
- d) The in scope suppliers that responded to NetApp's RCOI Survey account for 97% of in-scope component spend for calendar year 2016, an increase from 95% in 2015. This improvement is due to an increased effort on following up with non-responsive suppliers.
- e) Compared smelters and refiners identified against the list of those on CFSI's Conflict Free Smelter Program's lists for tantalum, tin, tungsten and gold), including those that have received a "conflict free" designation by participating in an independent third party audit.
- f) Performed enhanced data analytics to ensure identification of all in scope suppliers throughout NetApp's entire supply chain.
- g) Analyzed CMRT responses and provided feedback to suppliers.

*STEP 3: Design and implement a strategy to respond to identified risks*

- a) NetApp has established a supplier Conflict Minerals policy, which outlines NetApp's requirements for its suppliers:
  - a. Sourcing minerals from socially responsible suppliers;
  - b. Requesting suppliers downstream to source minerals from socially responsible suppliers;
  - c. Providing NetApp with prompt, truthful, and accurate information regarding each supply source and the nature of the sourcing materials as it relates to the requirements of Section 1502; and
  - d. Cooperating with regular business reviews, surveys, and audits undertaken by or for NetApp so that it can comply with the requirements of Section 1502.
- b) Through calendar year 2016, NetApp continued to flow down its Conflict Minerals policy to its in scope supply base. This has aided in defining sourcing requirements for products supplied to NetApp.
- c) NetApp's supplier qualification and assessment program includes audits of supplier representations of their status to validate their previous and current reporting.
- d) In 2016, NetApp attended Conflict Minerals forums and collaborated with industry peers to define and improve best practices, and encourage responsible sourcing.
- e) In calendar year 2017, NetApp plans to:

- a. Continue to work with its top materials-spend suppliers to improve transparency and reporting. Concurrently, through its supplier performance management process, NetApp continues to assess risk for its supply base that are not improving their level of transparency required by Section 1502 to promote its intended purpose. NetApp will work with suppliers with underdeveloped processes, providing information and guidance in an attempt to increase transparency.
- b. Compare RCOI Survey responses to information collected via independent conflict free smelter validation programs, such as CFSI's Conflict-Free Smelter Program, to identify unknown or unrecognized smelters or refiners. NetApp will contact in scope suppliers with unknown or unrecognized smelters or refiners and request their participation in improving data accuracy and promoting CFSI's efforts.
- c. Continue its participation in Conflict Minerals forums and collaborating with industry peers to define best practices, and encourage responsible sourcing. NetApp will continue to support CFSI in its efforts to increase the number of smelters and refiners validated as "conflict free."

*STEP 4: Support industry associations that carry out independent third party audits of smelter/refiner's due diligence practices*

As a member of the Electronic Industry Citizenship Coalition, or "EICC," NetApp will continue to participate in the CFSI to assist in increasing the number of smelters and refiners directly and indirectly in its supply base that have been validated as "conflict free" under the CFSI's Conflict-Free Smelter Program, which uses an independent third-party audit to identify smelters and refiners that have systems in place to assure sourcing of only conflict-free materials. NetApp was not required to obtain a third party independent audit of its own due diligence process and compliance efforts and results in 2016

*STEP 5: Report annually on supply chain due diligence*

NetApp's Conflict Minerals policy, Form SD and this Conflict Minerals Report are currently posted on NetApp's public website:

<http://www.netapp.com/us/company/our-story/conflict-minerals.aspx>

<http://investors.netapp.com/governance.cfm>; and

<http://investors.netapp.com/sec.cfm>.

### **Results of Due Diligence**

NetApp, as a purchaser, is many steps removed from the mining of the Conflict Minerals and does not purchase raw ore or unrefined Conflict Minerals, nor does it purchase bulk Conflict Minerals in the form of ingots or bullion for use in its products. The origin of NetApp's Conflict Minerals cannot be determined with any certainty once the raw ores are smelted, refined and converted to ingots, bullion or other derivatives. The smelters and refiners are consolidating points for raw ore and are in the best position in the total supply chain to know the origin of the ores.

Based on the information that was provided by NetApp's in scope suppliers and otherwise obtained through its due diligence efforts described herein, NetApp believes that the facilities listed in Appendix A were used to process a portion of the necessary Conflict Minerals contained in NetApp's products for calendar year 2016. Furthermore, NetApp has reasonably determined from information provided by the CFSP and otherwise obtained through NetApp's due diligence efforts, that it does not have sufficient information to determine whether portions of its products contain recycled or scrap sources.

## Appendix A

### Smelters or Refiners (SORs) that may be used to process the Conflict Minerals contained in NetApp's Products.

SOR Status as of December 31, 2016: "CFSP Listed" indicates SOR is publicly listed on the CFSP web site and considered "conflict-free" as of the date indicated based on the criteria used by CFSI to assess SORs. "Unknown" indicates SOR is either in process for CFSP assessment or has not started the process as of the date indicated.
